Professional Summary

Dedicated Computer Engineering student (Graduating Feb 2027) with a strong technical foundation in security operations, IT infrastructure, and data pipeline development. Passionate about cybersecurity, holding the Google Cybersecurity Professional Certificate alongside hands-on threat hunting and forensic experience gained via the TryHackMe SOC Level 1 path. Possesses B2 English proficiency, strong scripting logic, and a disciplined work ethic. Seeking a SOC Analyst internship or entry-level technical role within a progressive IT security team.

Education

Akademia Finansów i Biznesu Vistula Warsaw, Poland
Bachelor of Engineering in Computer Engineering *Oct 2023 – Feb 2027*

- **Relevant Coursework**: Operating Systems, Computer Networks, Database Management, Programming Fundamentals.
- **Thesis Focus**: Data warehouse design and ETL pipelines for small business analytics.

SSM Polytechnic College Tirur, India
Diploma in Computer Engineering *Jul 2019 – Apr 2022*

- Built a foundational understanding of computer networks, programming principles, and hardware systems.

Certifications & Training

TryHackMe Online
SOC Level 1 (Security Operations Center) *Completed Jun 2026*

- Completed comprehensive defensive paths covering SIEM engineering, log analysis, digital forensics, and incident response.
- Gained practical experience investigating suspicious logs, detecting phishing artifacts, and identifying malicious network traffic patterns.

Google Coursera
Cybersecurity Professional Certificate *Completed Nov 2025*

- Completed an intensive 8-course series covering the **NIST Cybersecurity Framework**, Linux, SQL, and security operations.
- Key Skills: Network security, vulnerability assessment, and analyzing security logs.

IELTS English Proficiency Level B2
Upper Intermediate

- Demonstrated ability to communicate complex technical concepts effectively in English.

Technical Skills

Security & Networking: NIST Framework, Packet Analysis (Wireshark), Incident Response, Phishing Investigation, OSINT.
SIEM & Detection Tools: Splunk (Basic Querying & Log Analysis), Wazuh, Wireshark.
Languages & Scripting: Python (Scapy, Requests libraries), Bash scripting, Windows/Linux system administration.
Databases & Data Management: SQL (Database querying & auditing), SQLite data structures, ETL concepts.
Languages: English (B2 - Professional Working Proficiency).

Technical Projects

Automated Network Forensics Pipeline | *Python, Scapy, SQLite, VirusTotal REST API*

- Engineered an automated script utilizing `Scapy` to parse raw binary network packet captures (`.pcap`) and cleanly extract distinct external target IP addresses.
- Integrated the VirusTotal API to dynamically enrich collected IP addresses with live external threat intelligence data while deploying defensive rate-limit handlers.
- Architected a portable SQLite local database schema to permanently log and serialize enriched telemetry, providing structured audit tracking of historical threat records.

SIEM Log Investigation | *Splunk, TryHackMe SOC Level 1*

- Utilized Splunk basic querying to filter and analyze security logs, identifying indicators of compromise (IOCs) and potential intrusion attempts.

- Correlated events across different data sources to construct a timeline of suspicious activities for incident reporting.

Network Traffic Analysis | *Wireshark, TryHackMe SOC Level 1*

- Conducted deep packet inspection using Wireshark to investigate anomalous network behavior and trace malicious activity.
- Applied advanced filtering techniques to isolate specific protocols and examine unencrypted payloads.

Phishing Email Analysis | *TryHackMe SOC Level 1*

- Investigated suspicious emails by analyzing email headers, identifying spoofed domains, and extracting malicious artifacts.
- Defanged malicious URLs and documented findings to recommend remediation steps and update security filters.

SQL Database Security Audit | *SQL, Google Cybersecurity Certificate*

- Utilized SQL queries to inspect database logs and identify potential security issues.
- Filtered login attempts to detect failed authentication spikes and validated employee access privileges against organizational policies.
